Mohammad Sayeef Alam

Exeter, UK | alam.sayeef@gmail.com | +447833546972 | LinkedIn

Summary

Biostatistician and Health Economist with 6+ years' experience generating real-world evidence (RWE) across European healthcare systems. PhD-trained in genetic epidemiology, applying regression, survival, and comparative effectiveness analyses to secondary healthcare databases and patient registries, and delivering findings via client-facing reports and R Shiny applications.

Experience

Graduate Research Assistant in HTA, University of Exeter – Exeter, UK March 2026 – Present

- Appraise industry decision models for NHS reimbursement using scenario and sensitivity analyses.
- Build de novo HTA decision models in R and Excel VBA with reproducible, audit-ready pipelines.
- Co-author NICE advisory reports alongside clinicians, statisticians, and health economists.
- Advance evidence synthesis and uncertainty quantification including healthtech/medtech consultancy work.

Researcher, NTNU – Trondheim, Norway April 2025 – March 2026

- Ran regression analyses on real-world registry and clinical data, applying longitudinal modelling and confounding control.
- Prototyped a modular R Shiny tool for Nordic HTA QALY-shortfall analysis, cutting ad-hoc requests from partners.
- Migrated Excel-based obesity decision models to version-controlled R with Docker, boosting team reproducibility.

Associate, Parexel – Remote, India July 2021 – February 2022

- Co-developed statistical analysis plans, scripting analyses and validating datasets for accuracy.
- Ran statistical analyses for evidence synthesis, utility estimation, and uncertainty assessment.
- Designed clinical endpoint dashboards tracking survival outcomes and therapy lines for stakeholder reporting.
- Built an interactive R Shiny app for economic evaluations with on-demand downloadable reports.

Education

PhD in Genetic Epidemiology April 2022 – April 2026
Norwegian University of Science and Technology – Trondheim, Norway

MPhil & MSc in Biostatistics and Demography July 2018 – May 2021
International Institute for Population Sciences – Mumbai, India

Skills

Methods:	Regression, Survival & Longitudinal Analysis, Real-World Data Analysis, NMA & MAIC, Propensity score matching, Predictive Modelling & Machine Learning
Software:	R/Shiny, Stata, SAS, SQL, Python, Excel (VBA), Git, Docker, Bash
Health Economics:	De novo Cost-effectiveness (or CC or BIM) with Probabilistic sensitivity analysis
Healthcare Data:	NHS (UK) HTA processes, Norwegian patient registries & secondary care databases
