Mohammad Sayeef Alam

Exeter, UK | alam.sayeef@gmail.com | +4748671602 | LinkedIn

Key Qualification

- PhD from NTNU with 5+ years of experience in advanced analyses executing complex data specializing in longitudinal modeling, survival analysis, and causal inference.
- Extensive experience collaborating with interdisciplinary research teams (clinicians, epidemiologists, health economists), advising colleagues on study design, protocol development, statistical analysis plans, and peer-reviewed publication.
- Applied expertise in constructing and appraising decision-analytic models, conducting utility mapping (QALYs), and executing sensitivity and scenario analyses.
- Skilled in developing open-source R programming, and dynamic R Shiny dashboards to make complex analytics accessible to non-statistical researchers.
- Norwegian language proficiency at B1-B2 level, with an active commitment to reaching full professional fluency.

Experience

Graduate Research Assistant in HTA, PenTAG, University of Exeter – UK March 2026 – Present

- Appraise industry-submitted Single Technology Appraisal (STA) decision models to inform NICE reimbursement decisions, evaluating the full continuum from economic literature reviews and evidence synthesis to structural modeling, scenario testing, and sensitivity analyses.
- Develop de novo HTA decision models and adapt existing NICE models using R and Excel VBA to support Multiple Technology Appraisal (MTA) projects.
- Collaborate within multidisciplinary teams including clinicians, epidemiologists, and statisticians to co-author comprehensive evidence assessment reports that directly advise NICE recommendation committees.
- Execute advanced statistical analyses spanning survival analysis, evidence generation, uncertainty quantification, and Delphi studies to deliver tailored solutions for external consultancy clients.

PhD Stipendiat, NTNU – Trondheim, Norway April 2022 – March 2026

- Integrated and harmonised real-world data from Norway's HUNT registry, health surveys, and clinical databases into analysis-ready, linked datasets.
- Executed regression and longitudinal analyses on Norwegian registry and clinical data, with rigorous confounding control to derive causal evidence.
- Applied large-scale statistical pipelines (GWAS, polygenic risk scoring) across 24 million variants to identify genetic associations and stratify population risk groups.
- Built an open-source R package migrating legacy health-analytics models into version-controlled pipelines to enhance data quality assurance and reproducibility.
- Prototyped a modular R Shiny tool for Nordic HTA QALY-shortfall analysis, reducing ad-hoc requests from external partners.
- Disseminated research findings through peer-reviewed publications and national and international conference presentations.
- Secured 150,000+ NOK in competitive funding for an international research collaboration, strengthening international academic partnerships.

Associate, Parexel – Remote, India July 2021 – February 2022

- Developed dynamic R Shiny applications for economic evaluations to support HTA submissions and strategic payer decision-making.
- Conducted feasibility assessment, indirect treatment comparisons, and complete economic analyses for direct integration into HTA dossiers and regulatory/payer submissions.
- Designed and implemented interactive dashboards to visualize key clinical endpoints including survival outcomes, treatment sequences, and demographic summaries tailored for regional stakeholder reporting.
- Delivered actionable insights to internal and external stakeholders, iteratively incorporating cross-functional feedback to refine final project deliverables.

Education

PhD in Genetic Epidemiology April 2022 – March 2026
Norwegian University of Science and Technology – Trondheim, Norway

MPhil in Biostatistics and Demography July 2020 – May 2021
International Institute for Population Sciences – Mumbai, India

MSc in Biostatistics and Demography July 2018 – June 2020
International Institute for Population Sciences – Mumbai, India

BSc in Statistics April 2014 – May 2018
University of Calcutta – Kolkata, India

Skills

Statistical Methodology:	Causal Inference, Longitudinal Analysis & Cohort Modeling, Survival Analysis, Predictive Modeling & Risk Stratification
Research Design:	Protocol Development, Methodological Advising, Study Power & Sample Size Calculation, Evidence Synthesis, Health Technology Assessment
Data & Registries:	Norwegian Patient Registry (NPR), Clinical Databases, Longitudinal Panel Data, Biobank
Software:	R/Shiny, Stata
